

HOW TO CREATE A SUSPENDED SHELTER

Disclaimers

- This guide does not provide any guarantees of performance. The performance of each tarp varies in accordance with the use and type of install.
- The tarps are not indestructible and if they are exposed to strains beyond their capacities they will tear or get damaged.
- Under no circumstances will ARK Tarps be held responsible or liable in any way for any claims, damages, losses, injuries, expenses, costs or liabilities whatsoever (including, without limitation, any direct or indirect damages for loss of profits, business interruption or loss of information or life) resulting or arising directly or indirectly from your use of our products or from your reliance on the information and material on our website, this guide or product insert, even if ARK Tarps has been advised of the possibility of such damages in advance.

By using our website or this guide, you hereby consent to the above

HOW TO CREATE A SUSPENDED SHELTER

Step 1

Find the perfect location: Look for two trees that are a good distance apart and sturdy enough to support the weight of the tarp and anything that might be underneath it.

HOW TO CREATE A SUSPENDED SHELTER

Step 2

Attach the tarp: Use rope or bungee cords to attach the corners of the tarp to the trees. Make sure the tarp is pulled tight and secure.

HOW TO CREATE A SUSPENDED SHELTER

Step 3

Create a ridge line: Tie a rope between the two trees, about a foot higher than the tarp, to create a ridge line. This will help keep the tarp stable and prevent sagging.

Step 4

Add support: Use additional ropes or bungee cords to create support lines from the ridge line to the ground. This will provide extra stability and prevent the tarp from collapsing. Use bungee ropes to secure the tarp as it keeps the tension on but also provides some give in the wind.

Step 5

Prevent the parachute effect: To prevent the tarp from billowing and creating the parachute effect, put ropes across the top of the tarp. Best way to achieve this is to tie a rope between the trees just above the tarp/your original ridge line and tie additional ropes or bungee cords from this rope to the ground. This will prevent the tarp from billowing up and will also prevent air from getting trapped underneath it.
